

1. Navigate to the directory and run the program. No input files necessary.

```
C:\Windows\System32\cmd.exe - python p3.py
C:\Users\Treys\PycharmProjects\AI_p3>python p3.py
```

2. The GUI will appear, and you will have the option to either run using the prepopulated inputs, or you can clear the inputs and add your own via the keyboard or files.

3. The output will appear under the RUN button.
